

WHAT IS CLAIMED IS

5

Sub A 1. A central control station, which controls radio base stations connected thereto via radio links and optical fiber links, comprising:

10 a demultiplexing unit which demultiplexes signals supplied from an upper-level station;
signal conversion units which convert the respective demultiplexed signals into converted signals having a unified transmission format; and
15 a distribution unit which distributes the converted signals to the radio links and the optical fiber links.

20

2. The central control station as claimed in claim 1, wherein said signal conversion units are intermediate-frequency conversion units which convert the respective demultiplexed signals into
25 intermediate frequency signals having an intermediate frequency, and said central control station further comprising:

30 a radio frequency conversion unit which converts one of the intermediate frequency signals into a radio frequency signal having a radio frequency;

a radio transmission unit which transmits the radio frequency signal to one of the radio base

09748259-122700

stations; and

an optical signal transmission unit which transmits one of the intermediate frequency signals to one of the radio base stations after conversion thereof into an optical signal,

whereby the signals from the upper-level station are transmitted by the radio transmission unit to the one of the radio base stations connected to the central control station via one of the radio links, and are transmitted by the optical signal transmission unit to the one of the radio base stations connected to the central control station via one of the optical fiber links.

3. The central control station as claimed in claim 1, wherein said signal conversion units are radio-frequency conversion units which convert the respective demultiplexed signals into radio frequency signals having a radio frequency, and said central control station further comprising:

an intermediate frequency conversion unit which converts one of the radio frequency signals into an intermediate frequency signal having an intermediate frequency;

a radio transmission unit which transmits one of the radio frequency signals to one of the radio base stations; and

an optical signal transmission unit which transmits the intermediate frequency signal or one of the radio frequency signals to one of the radio base stations after conversion thereof into an optical signal,

0048259-122700

whereby the signals from the upper-level station are transmitted by the radio transmission unit to the one of the radio base stations connected to the central control station via one of the radio links, and are transmitted by the optical signal transmission unit to the one of the radio base stations connected to the central control station via one of the optical fiber links.

10

4. The central control station as claimed in claim 1, wherein said signal conversion units are radio-frequency conversion units which convert the respective demultiplexed signals into radio frequency signals having a radio frequency, and said central control station further comprising:

a radio transmission unit which transmits one of the radio frequency signals to one of the radio base stations; and

an optical signal transmission unit which transmits one of the radio frequency signals to one of the radio base stations after conversion thereof into an optical signal,

whereby the signals from the upper-level station are transmitted by the radio transmission unit to the one of the radio base stations connected to the central control station via one of the radio links, and are transmitted by the optical signal transmission unit to the one of the radio base stations connected to the central control station via one of the optical fiber links.

00748259 122700

5 5. The central control station as claimed
in claim 1, wherein said signal conversion units are
base-band modulation units which convert the
respective demultiplexed signals into base-band
signals, and said central control station further
10 comprising:

 a digital-to-analog conversion unit which
converts one of the base-band signals into an analog
signal;

 a radio frequency conversion unit which
15 converts the analog signal into a radio frequency
signal having a radio frequency;

 a radio transmission unit which transmits
the radio frequency signal to one of the radio base
stations;

20 an optical signal conversion unit which
converts one of the base-band signals into a signal
for optical fiber communication; and

 an optical signal transmission unit which
converts the signal for optical fiber communication
25 into an optical signal, and transmits the optical
signal to one of the radio base stations,

 whereby the signals from the upper-level
station are transmitted by the radio transmission
unit to the one of the radio base stations connected
30 to the central control station via one of the radio
links, and are transmitted by the optical signal
transmission unit to the one of the radio base
stations connected to the central control station

09748259 122700

via one of the optical fiber links.

5

6. The central control station as claimed in claim 1, wherein said signal conversion units are base-band modulation units which convert the respective demultiplexed signals into base-band signals, and said central control station further comprising:

a digital-to-analog conversion unit which converts one of the base-band signals into an analog signal;

15 a radio frequency conversion unit which converts the analog signal into a radio frequency signal having a radio frequency;

an intermediate frequency conversion unit which converts one of the base-band signals into an intermediate frequency signal having an intermediate frequency;

20 a radio transmission unit which transmits the radio frequency signal to one of the radio base stations;

25 an optical signal conversion unit which converts one of the base-band signals into a signal for optical fiber communication; and

an optical signal transmission unit which converts the intermediate frequency signal or the signal for optical fiber communication into an optical signal, and transmits the optical signal to one of the radio base stations,

30 whereby the signals from the upper-level

a plurality of radio base stations; and
a central control station controlling said
radio base stations and connected to some of said
radio base stations directly via optical fibers,
wherein one of said radio base stations

includes a radio frequency conversion unit
configured to convert an intermediate frequency
signal into a radio frequency signal and a radio
transmission unit configured to transmit the radio
5 frequency signal to another one of said radio base
stations, whereby said one of said radio base
stations receives a signal having an intermediate
frequency from the central control station, and
transmits the signal received from the central
10 control station to said another one of said radio
base stations.

15

9. A radio-base-station system,
comprising:

a plurality of radio base stations; and
a central control station controlling said
20 radio base stations and connected to some of said
radio base stations directly via optical fibers,
wherein one of said radio base stations
includes a radio transmission unit configured to
transmit a radio frequency signal to another one of
25 said radio base stations, whereby said one of said
radio base stations receives a signal having a radio
frequency from the central control station, and
transmits the signal received from the central
control station to said another one of said radio
30 base stations.

10. A radio-base-station system,

00748259-122700

comprising:

a plurality of radio base stations; and
a central control station controlling said
radio base stations and connected to some of said
5 radio base stations directly via optical fibers,
wherein one of said radio base stations
includes a digital-to-analog conversion unit
configured to convert a base-band signal into an
analog signal, a radio frequency conversion unit
10 configured to convert the analog signal into a radio
frequency signal, and a radio transmission unit
configured to transmit the radio frequency signal to
another one of said radio base stations, whereby
said one of said radio base stations receives a
15 signal as a digital signal from the central control
station, and transmits the signal received from the
central control station to said another one of said
radio base stations.
